Text

Pl= Number of players
Pn=Number of penguins for each player
c=Horizontal and vertical size coordinates of the board
T=Total number of tiles
T1=Tile(s) with 1 fish
T2=Tile(s) with 2 fish
T3=Tile(s) with 3 fish
Standard Board Size= 2x2, in this case c=2

Start

Pl, Pn, c, T, T1, T2, T3

Enter the number of players(Pl)

The board will be adjusted according to the number of players and penguin(s)

Were you given one or two penguins?(Pn)

Pn=1 → $c=Pl^{**}2$

Pn=2 → $c=(Pl*2)*2$

The size of the board will be c x c

Randomize the number of fish on tiles while:
T>T1>T2>T3;
T1>=Pl*Pn

Display positions of T1 tiles

Enter positions (Pn*Pl) number of times
